Hydrophobic bacteria and fungus bind

• Allow easy passage of exudate through interface when under compression.
• Is flexible and easy to apply.
• Has good compatibility with secondary dressings.
• Is comfortable in situ.
• Can adhere if inadequate levels of moisture/exudate.
• Nil side effects noted with any patients.

CONCLUSION
Our results demonstrate clear benefits for using Sorbact antimicrobial dressings as an interface on chronic wounds. Sorbact offers an effective alternative approach to the management of bio-burden that is both cost effective and non-toxic. Sorbact has now been implemented for use across the GCHD.
