SUPER ABSORBENT

SOAKS UP TO 1 LITRE OF LIQUID

SOAKS UP SPILLS SAFELY, IN SECONDS

Proven to kill known microorganisms associated with blood, urine and faecal spills

Including Hepatitis B & C, HIV, *Clostridium difficile*, Norovirus and many more. High power oxidative kill against all microorganisms including non-enveloped viruses and bacterial endospores. Conforms to EN1275, EN1276, EN13704, EN14348, EN14476, EN14561, EN14562 and EN14563.

Simple, quick and highly effective

Replaces traditional chlorine based spill kits which are time consuming and hazardous. Its exceptional ease of use increases compliance which reduces incidents of pathogen transmission.

Easy and safe disposal of soiled wipes

Clinell Spill Wipes packaging is designed so that all items, including the protective clothing worn by the user, can be disposed of in the resealable bag and placed into the appropriate disposal channel.

Based on technology from the most clinically proven wipe in the world

Similar to Clinell Sporicidal Wipes, the super absorbent pad generates peracetic acid and hydrogen peroxide on activation. This proven formula is also safe to use on urine, unlike traditional chlorine based products.

SPILL WIPES

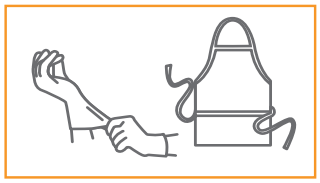
Clinell Spill Wipes are designed to make dealing with body fluid spills quick and easy. The pack contains one super absorbent, peracetic acid generating pad and two large disinfectant wipes. All within a resealable bag for the easy and safe disposal of waste.

The traditional body fluid spills protocol requires the spill to be decontaminated with chlorine before it can be safely removed. This is a lengthy procedure. A barrier agent is placed around the edges of the spill, 10,000ppm of chlorine granules are placed over the spill and left for a few minutes to neutralise the blood-borne pathogens.

Next, chlorine granules are removed with a scooper/ dustpan and disposed of in a biohazard bag. The area is wiped with additional absorbent towels to remove any residue.

This entire process takes at least 10 minutes and exposes the user to hazardous chemicals as well as carcinogenic toxic fumes. This may be why compliance is very low with current chlorine based blood spill kits. In addition, chlorine spill kits cannot be used on urine - two different spill kits are needed, one for blood and another for urine. Clinell Spill Wipes are effective for use on both.

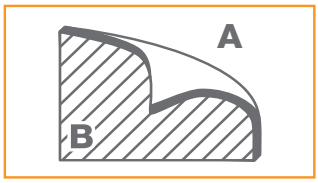
Clinell Spill Wipes were created to make dealing with body fluid spills easier and safer. They increase compliance in this necessary, yet often neglected, infection control procedure in a cost effective manner.



1. Wear appropriate PPE.

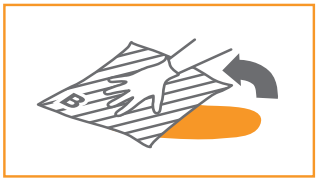
2. Tear the pack open.

3. Remove the wipes.



4. A is the active side and should be placed on the spill.

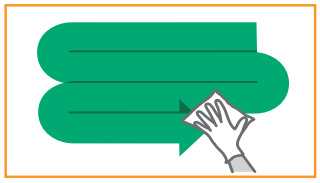
5. Place the active side (A) face down onto the spill. Leave to absorb for 30 secs.



6. Push down on the plastic backed side (B) and move around until the spill is fully absorbed.

7. Place the soiled wipe back into the pack.

8. Remove a disinfectant wipe from the sachet.



9. Clean the spill area in an 'S' shaped motion, from clean to dirty.

10. Place the soiled wipe and empty sachet back into the pack.

11. If required repeat steps 8-10 with the second wipe and re-seal.

12. Dispose of in the appropriate waste stream.
